Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claims 1-14 are presented for examination on the merits.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Edwardson et al (US 5763411) in view of Chen et al (US 6761903), both cited on enclosed PTO-892 Form.

Claims are drawn to method of preventing scarring from injury sites comprising applying to an injury site a bandage material coated with a defibrinogenating agent or fibrinolytic agent.

Edwardson et al teach coating bandages, sutures, or other solid support with fibrin materials. Note abstract and col. 26, lines 25-35.

Chen et al teach coating agents defibrinogenating agents, like ancrod and fibrinolytic agents, like nPA or fenofibrate. Note col. 5, lines 30-35 and col. 33, lines 15 20 and 25-35 and col. 34, line 47.

The claims differ from Edwardson et al in that the claimed coating agents are not disclosed.

It would have been obvious to one of ordinary skill in the art at the time the claimed invention was made to replace fibrin monomer coating disclosed by Edwardson

et al with coating agents as disclosed by Chen et al in order to provide for a method to prevent scarring at injury sites. Clearly one of skill would have been motivated to provide bandages to prevent scarring and to coat them with these well known ingredients in the art is clearly an obvious modification of Edwardson et al. In the absence of persuasive evidence to the contrary the claims are rendered prima facie obvious because one of skill in the art would have expected successful results.

All claims fail to be patentably distinguishable over the state of the art discussed above and cited on the enclosed PTO-892 and/or PTO-1449. Therefore, the claims are properly rejected.

The remaining references listed on the enclosed PTO-892 and/or PTO-1449 are cited to further show the state of the art.

No claims are allowed.
